

One-sided lever with a roller, part of a manual tire changer for tubeless tires of truck

One-sided lever with a roller, part of a manual tire changer for tubeless truck tires (part no 519-9186B).

Description

One-sided lever with a roller, part of a manual tire changer for tubeless truck tires (part no 519-9186B).

The length and inclination of the lever can be adjusted thanks to the serrations cut on the spoon. The specially profiled shape of the tips and grips prevents damage to the tire bead and rim.

The lever pattern has been designed on the basis of precise measurements of the rim profile and does not allow excessive stress on the material during use.

The optimally selected length provides a comfortable lever for maximum work efficiency with minimum effort.
