Product Launch

Self-vulcanizing repair systems

REMAREP ULTRA 10 – Repair in record time

Dear Sir or Madam,

in our current issue of PM - News we are happy to present you the new two-component repair compound consisting of solvent free and UV radiation resistant polyurethane.

Every unplanned failure of the conveyor belt system is wasting money. With REMAREP ULTRA 10 downtimes can be reduced to a minimum. REMAREP ULTRA 10 is suitable for repairing damage to cover plates and longitudinal cracks in conveyor belts, temporary sealing of punctures in conveyor belts, filling of joints in rubber linings and repairs to PU, PVC and elastomer components. After 15 minutes, the hardness is 65 Shore A, after 60 minutes the conveyor belt can be loaded again. The red color helps identifying the damage and indicates the condition of the belt.
